Learning objectives

- **Observe** live surgeries, narrated by leading international experts, and understand the technical and strategic nuances in real time.
- **Stay** up to date on thyroid eye disease with a multidisciplinary approach: new targeted treatments, precise inflammation control, and surgical advances in functional rehabilitation.
- **Develop** clinical judgment in complex orbital pathology, addressing tumors, inflammation, or trauma with surgical decisions tailored to each situation.
- **Master** eyelid reconstruction in periocular oncology, balancing surgical intervention, aesthetics, and oncological preservation in decision-making.
- **Explore** a 360° approach to oculofacial aesthetics, combining science, technology, and artistry in fillers, lasers, and regenerative therapies with precision and respect for the gaze.
- **Deepen** your knowledge in upper and lower facial aesthetic surgery, including advanced blepharoplasty, brow lift, cosmetic ptosis, and new minimally invasive techniques.
- **Be inspired** by BOC keynote lectures, offering new perspectives, clinical innovation, and reflection for the future of practice.
- **Take part** in practical workshops on oculofacial rejuvenation, featuring cutting-edge techniques in fillers, CO2 laser, ultrasound, and regenerative technologies.
